Greetings all.

Please be advised that as of today, construction of a functional storm water diversion structure located on the west side above Cell #E6 is complete, per Section 19.6, of the Administrative Order on Consent (AOC) signed on January 25, 2010. I have included supportive pictures for your review. Pictures 1 & 2 depict the diversion wall showing the water pathway into the open channel, picture 3 depicts the bottom of the diversion channel showing the tie in to the in place Hobas pipe. Please contact me if you have any questions.

Best regards,

Joe Whelan
